

1. (Currently Amended) A graphic user interface for a computer comprising:
a viewable surface;
a schedule occupying all of said viewable surface and having at least one time slot
containing at least one descriptive entry; and
wherein said time slot dynamically changes an appointment time of said descriptive entry
depending upon real time location information relating to said descriptive entry
at least one link associated with said descriptive entry, said link starting at least one
computer application and opening a computer data file associated with said descriptive entry.
2. (Currently Amended) The graphic user interface in claim 1, further comprising at least
one link associated with said descriptive entry, said link starting at least one computer application
and opening a computer data file associated with said descriptive entry, wherein said link appears
on said schedule in said time slot.
3. (Original) The graphic user interface in claim 1, wherein said schedule comprises a calendar.
4. (Currently Amended) The graphic user interface in claim 1, wherein said time slot includes said real time location information relating to said descriptive entry.
5. (Currently Amended) The graphic user interface in claim 4, A graphic user interface for a
computer comprising:
a viewable surface;
a schedule occupying all of said viewable surface and having at least one time slot
containing at least one descriptive entry; and
at least one link associated with said descriptive entry, said link starting at least one
computer application and opening a computer data file associated with said descriptive entry,
wherein said time slot includes real time location information relating to said descriptive

entry, and

wherinc said time slot dynamically changes an appointment time of said descriptive entry depending upon said location information.

6. (Currently Amended) ~~The graphic user interface in claim 1, A graphic user interface for a computer comprising:~~

a viewable surface;

a schedule occupying all of said viewable surface and having at least one time slot containing at least one descriptive entry; and

at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry,

wherein said link is created automatically based upon a search of data files and applications using terms within said descriptive entry.

7. (Original) The graphic user interface in claim 1, wherein said descriptive entry comprises Internet searching and said computer file comprises a link history of said Internet searching.

8. (Original) The graphic user interface in claim 1, wherein said descriptive entry has a link to an associated virtual desktop.

9. (Currently Amended) A graphic user interface for a computer comprising:

a schedule having at least one time slot containing at least one descriptive entry; and

wherein said time slot dynamically changes an appointment time of said descriptive entry depending upon real time location information relating to said descriptive entry

at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry.

10. (Currently Amended) The graphic user interface in claim 9, further comprising at least

one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry, wherein said link appears on said schedule in said time slot.

11. (Original) The graphic user interface in claim 9, wherein said schedule comprises a calendar.

12. (Currently Amended) The graphic user interface in claim 9, wherein said time slot includes said real time location information relating to said descriptive entry.

13. (Currently Amended) ~~The graphic user interface in claim 12, A graphic user interface for a computer comprising:~~

a schedule having at least one time slot containing at least one descriptive entry; and at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry,
wherein said time slot includes real time location information relating to said descriptive entry, and

wherein said time slot dynamically changes an appointment time of said descriptive entry depending upon said location information.

14. (Currently Amended) ~~The graphic user interface in claim 9, A graphic user interface for a computer comprising:~~

a schedule having at least one time slot containing at least one descriptive entry; and at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry,
wherein said link is created automatically based upon a search of data files and applications using terms within said descriptive entry.

15. (Currently Amended) The graphic user interface in claim 9, further comprising at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry, wherein said descriptive entry comprises Internet searching and said computer file comprises a link history of said Internet searching.

16. (Original) The graphic user interface in claim 9, wherein said descriptive entry has a link to an associated virtual desktop.

17. (Currently Amended) A method of supplying a graphic user interface for a computer, said method comprising:

inputting at least one descriptive entry into at least one time slot; and
dynamically changing an appointment time of said descriptive entry depending upon real time location information relating to said descriptive entry
automatically creating at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry.

18. (Currently Amended) The method in claim 17, further comprising automatically creating at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry, wherein said link appears on said schedule in said time slot.

19. (Currently Amended) The method in claim 17, wherein said schedule comprises time slot is within a calendar.

20. (Currently Amended) The method in claim 18, wherein said time slot includes said real time location information relating to said descriptive entry.

21. (Currently Amended) The method in claim 19, A method of supplying a graphic user interface for a computer, said method comprising:
inputting at least one descriptive entry into at least one time slot; and
automatically creating at least one link associated with said descriptive entry, said link
starting at least one computer application and opening a computer data file associated with said
descriptive entry,
wherein said time slot includes real time location information relating to said descriptive
entry, and
wherein said time slot dynamically changes an appointment time of said descriptive entry depending upon said location information.
22. (Currently Amended) The method in claim 17, A method of supplying a graphic user interface for a computer, said method comprising:
inputting at least one descriptive entry into at least one time slot; and
automatically creating at least one link associated with said descriptive entry, said link
starting at least one computer application and opening a computer data file associated with said
descriptive entry,
wherein said creating of said link is based upon a search of data files and applications using terms describing said descriptive entry contained within said time slot.
23. (Currently Amended) The method in claim 17, further comprising automatically creating
at least one link associated with said descriptive entry, said link starting at least one computer
application and opening a computer data file associated with said descriptive entry, wherein said
descriptive entry comprises Internet searching and said computer file comprises a link history of
said Internet searching.

24. (Original) The method in claim 17, wherein said descriptive entry has a link to an associated virtual desktop.

25. (Currently Amended) A program storage device readable by machine, tangibly embodying a program of instructions executable by said machine to perform a method for supplying a graphic user interface for a computer, said method comprising:

inputting at least one descriptive entry into at least one time slot; and
dynamically changing an appointment time of said descriptive entry depending upon real time location information relating to said descriptive entry
~~automatically creating at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry.~~

26. (Original) The program storage device in claim 25, further comprising automatically creating at least one link associated with said descriptive entry, said link starting at least one computer application and opening a computer data file associated with said descriptive entry, wherein said link appears on said schedule in said time slot.

27. (Original) The program storage device in claim 25, wherein said schedule comprises time slot is within a calendar.

28. (Original) The program storage device in claim 25, wherein said time slot includes said real time location information relating to said descriptive entry.

29. (Currently Amended) The program storage device in claim 25, A program storage device readable by machine, tangibly embodying a program of instructions executable by said machine to perform a method for supplying a graphic user interface for a computer, said method comprising:

inputting at least one descriptive entry into at least one time slot; and
automatically creating at least one link associated with said descriptive entry, said link
starting at least one computer application and opening a computer data file associated with said
descriptive entry.

wherein said time slot dynamically changes an appointment time of said descriptive entry depending upon said location information.

30. ((Currently Amended) The program storage device in claim 25, A program storage device readable by machine, tangibly embodying a program of instructions executable by said machine to perform a method for supplying a graphic user interface for a computer, said method comprising:

inputting at least one descriptive entry into at least one time slot; and
automatically creating at least one link associated with said descriptive entry, said link
starting at least one computer application and opening a computer data file associated with said
descriptive entry.

wherein said creating of said link is based upon a search of data files and applications using terms describing said descriptive entry contained within said time slot.

31. (Original) The program storage device in claim 25, wherein said descriptive entry has a link to an associated virtual desktop.
